I have hearing aids. Now what?

Getting hearing aids is a big step and investment in your quality of life. You have an exam, select your devices, and have them programmed for you. But, the process doesn't stop there.

It is important to continue to check in with your Audiologist for routine maintenance on your hearing aids. Here are three reasons you should have regular follow up care.

1. Hearing aids are delicate devices that need to be maintained and serviced regularly to ensure they are working effectively. A check-up can detect any issues with the hearing aid's components and prevent further damage.

WHAT'S IN THIS MONTH'S ISSUE:

- Call for donations

2. Your hearing ability can change over time, so a hearing aid check-up can ensure that the hearing aid is still providing the right level of amplification. Part of routine maintenance is annual testing for your hearing and your hearing aid.

3. A hearing aid check-up can provide an opportunity to discuss any new hearing concerns with a professional and receive advice on how to manage them.

Your lifestyle, hearing needs, and technology can change. A check up helps ensure you are getting the most from your hearing treatment. Services may be included with your hearing aid plan, so call to schedule your check up appointment today.

Make a *Splash* this summer with your best hearing yet!

Summer is the perfect time to upgrade your hearing devices. Trade in your used devices for special summer savings on new technology.

All donations go to Hearing The Call Sarasota non-profit organization to help those in need.

Receive up to **\$800** off your purchase with eligible trade in of your current hearing devices.

Dear Dr. HearCare

DO I WANT BLUETOOTH?

Bluetooth in hearing aids is becoming a standard feature. It can add to the useability of hearing aids and help keep you connected to more around you. Here's What we love about Bluetooth.

If you use your cell phone as your primary phone or spend time making calls on your phone, Bluetooth can improve the sound quality and clarity of the phone conversation. Some devices also allow for hands-free calling which is a great safety feature and added convenience.

If you enjoy streaming music, podcasts, audiobooks, or videos from your phone or a tablet, then Bluetooth is a great option to have. The hearing aids can take the place of your headphones or earbuds, with the added benefit of improving your hearing. Improving sound quality, ease of use, and allowing you to keep the sound private, are all beneficial aspects of Bluetooth. Ask us about setting up your Bluetooth!
